City Montessori School, Lucknow	**ISC Board** 2021	**94.25%**
City Montessori School, Lucknow	**ICSE Board** 2019	**94.80%**

PROJECTS

Harry Potter's Invisibility Cloak
January 2022 - April 2022
The project aims to create an executable code in Python with the help of OpenCV that enables us to become invisible, much like Harry Potter, by hiding behind any cloth of RGB color, which will function as an invisibility cloak. The program can also make one invisible without any cloth by making a few changes in the code.

Alexa
December 2021 - January 2022
The project aimed to build a device similar to Alexa out of Python that could first listen to my voice and then react to the query I asked. It has been linked to Google to access YouTube tracks & videos and provide information from Wikipedia.

Hand cricket game
November 2021 – December 2021
During my language-learning phase, I created a simple Python project. It is essentially a game of hand cricket against the computer. The game comprises hand cricket with fundamental rules & commentary on fours, sixes, and wickets.

Keylogging
May 2023 – June 2023
Developed a keylogging project in Python with advanced encryption algorithms to enhance cybersecurity measures and detect potential threats. Implemented comprehensive logging mechanisms, ensuring accurate tracking of keystrokes and system activities for analysis and prevention of unauthorized access.
